King Size CVO Road Glide

The qualities of the Harley-Davidson Road Glide models are all too often underestimated. The front fairing is screwed to the frame, and that seems strange when first turning the handlebar. The advantage, however, is clear because the mass, which has to be moved with the handlebar, is clearly less and makes this Tourer handle well in bends. Even the stock bike is already a tourer that can do more than just go straight on the motorway, but since this is Rick's Motorcycles one can safely assume that this bike is far from being a stock bike.
