That's it, 23" Street Glide

Die Harley-Davidson Street Glide models are among the most popular tourers that Harley has presently to offer. If you can get one with CVO as a prefix, you will get a fantastic stock upgrade kit. The three magical letters stand for Custom Vehicle Operation, which means that you not only have a limited edition version, but also that the Motor Company upped the performance and emphasized the visual appearance too. If Rick's Motorcycles gets hold of such a CVO model, then that means that the end result will be a very special and unique bike. In this case this means proud 1,868 cubic inches and 102 hp when opening up the gas. A jagged design in Sunburst Orange and Starfire Black signals from far away that this is a real touring sportsbike. The most striking characteristic of this Street Glide by Rick's is the finely high-polished 23 inch 7-spoke front wheel, however, more needed to be done than just to give the Tourer a larger wheel.
