## Rick's "Orange Shark"

The times are a changin and technology will advance, but one thing certainly does not change: the theme „Bolt On And Ride“ also includes the word ride. The new Harley-Davidson Touring models for the 2024 model year represented a big leap forward! All new rolling chassis, new design and a sophisticated new infotainment system with new and upgraded controls.

Within a very short time, the experienced Rick's team has adapted or developed numerous customparts for the new „Helix“ bikes. The established and thoroughly field-tested "Clubstyle" riser kit hides the impressive number of cables to the two control switch units in specially CNC-machined cable ducts. hidden under neatly covers. Rick's "Performance 1T" aluminum handlebars are bolted into the solid clamps, which in the case of the "Road Glide" do not require an instrument mount. Everything you need to know about riding and engine conditions and other data is shown on the huge 312 mm color LED display in the newly designed "Sharknose" fairing. The stock triple-trees of the new Helix platform are hidden under a Rick's kit of CNC-machined covers and risers installed here: the unique stability of the Rick's risers allows an immediate response to the slightest steering movement. Even with the 45 mm re-location kit, which allows smaller riders in particular a better handling of the ready-to-ride 380 kg tourer!
