Collective Performance with CCE

Custom Chrome Europe is one of the leading catalog companies for Harley-Davidson aftermarket parts in Europe, and original Rick's parts are considerable in the extra thick Custom Chrome catalog. For years the company in Grolsheim has come to appreciate the perfection and reliability of the parts specialist from Baden-Baden. The introduction of the 2018 Milwaukee-Eight models was for all parts manufacturers a big reset to zero and then start again. The new Harleys were different, nothing fitted any longer, everything had to be newly designed and produced. Rick's Motorcycles was the first company that created new custom parts for these completely new Softails. The first side licence plate holders were already presented a few days after the model presentation and shortly after followed wheel covers and complete rear parts with seat base plate, headlight masks and finally also foot controls.

When Custom Chrome approached Rick's to build a bike together, they were well prepared and could refer to a large portfolio of parts, which has already been tried and tested on many Milwaukee-Eight Softails. Rick's parts program would have been enough to build this Breakout only with parts from Baden-Baden, but this was not the intention of this cooperation, instead they wanted to build a bike made up of parts from the Custom Chrome catalog and additionally with parts and components from Rick's.
