F RICKS DR 114

The former V-Rod models have no doubt left a gap in the model range of the Company, to be filled with the Harley-Davidson FXDR 114, and in August 2018 they presented the successor of the power cruiser. The reactions were similar to the ones shortly after the turn of the Millennium when the first VRSC models were introduced as a new type of motorcycle.

The FXDR has a new Milwaukee-Eight motor and is based on the new Softail frame of the 2018 models. New are especially the chassis parts as well as the swingarm and the exhaust, including the pipe. The new design has little to do with the VRSC models and is far removed from the concept of the former V-Rod models, it has, however, a very distinct line.

Only the bottom protection element, better known from 30 plus ton trucks, does not really fit into the straight lines, and all four indicators seem to have been borrowed from use in freight traffic.
