Troubleshooter

To equip the Harley-Davidson Fat Boy with the Stage 4 kit to provide even more performance produces remarkable results. In addition, Rick's also improved the Softail in terms of looks and customized it according to the motto "everything please and only the best"!

The Milwaukee-Eight Fat Boy produces 114 ci when it comes out of the factory and 90 hp. These are impressive figures which guarantee enough power at all times. Harley-Davidson's in-house tuning department offers kits for almost all models with which the power can be increased even further. These Screamin' Eagle Stage kits come in four different configurations, which build on each other. On this Fat Boy it was decided to use the fourth and maximum build stage.

Harley-Davidson promises a torque increase of up to 40% and a power increase of up to 50%. The necessary Screamin' Eagle Stage 4 kit replaces numerous motor components with parts developed to give more power. Stage 4 kits for the Milwaukee-Eight motor have new CNC-machined cylinder heads with 1 mm larger valves and fully worked on combustion chambers. Together with the high-lift SE8-517 cam, the highly compressed pistons and the 64 mm throttle valve, as well as the new intake manifold, this combination delivers a torque of 180 Nm and power of up to 121 hp at the rear wheel, according to the manufacturer.

Tech Facts

Manufacturer:	Harley-Davidson / Rick's Motorcycles	Stretch:	Stock	Levers:	Rick's Motorcycles
Modell:	Fat Boy	Swingarm:	Rick's Fat Ass Kit	Riser:	Rick's Motorcycles
