Sunday Slim

Sunday Dress Slim - a noble “distinguished” Softail Slim FLSL 107

Many words have been written already about Rick's approved “modular” or “kit system” for creating outstanding custombikes, but as much as the term “kit” is true, it may sound a little like a downgrade of the inherent craftsmanship and individuality of Rick's unique and often built-to-order parts in each individual custom built at the Baden-Baden workshops. Genuine high-class metalwork and extensive labor are the formula for Rick's “Heavy Metal” components, in this creation from a solid metal-made front fender over an elaborate fuel tank extension back to the massive tailends that easily support rider and passenger weight while offering short-cut elegance. There are countless examples of the excellent combination options of Rick's Motorcycles parts – but this project by Rick's certainly represents a class its own: Not just by the very effective choice and combination of its individual components. A Softail “Slim” in a “Sunday suit”, a subtle and decent color combination, super-clean finish, in one word: a true eye-catcher!
